EDUCATION

RMIT University | *Bachelor of Software Engineering (Professional), Melbourne, VIC* 2025 - Present

Relevant coursework: Mathematics for Computing; Algorithms and Analysis; Software Architecture and Design; Full Stack Development; Software Engineering Process and Tools; Java Programming Studio; C++ Programming Studio

TECHNICAL SKILLS

Languages: Java, C++, TypeScript, JavaScript, SQL, HTML, CSS

Frontend and backend: React, Next.js, Node.js, Express, GraphQL, Spring Boot, Spring Security, Javalin, Thymeleaf

Databases and development tools: SQL Server/Azure SQL, SQLite, H2, TypeORM, JDBC, Git, GitHub Actions, Maven, Flyway, VS Code, IntelliJ IDEA

Testing tools: Jest, React Testing Library, Selenium, Cucumber, JMeter (testing coursework)

PROJECTS

Venue Vendors | *Next.js, TypeScript, Express, GraphQL, TypeORM, SQL Server* 2025

- Developed venue discovery and hiring workflows, including applications, preferences and availability, in a two-person full-stack university project.
- Connected React/Next.js interfaces to an Express REST API and separate GraphQL/Apollo administration workflows backed by SQL Server through TypeORM.
- Implemented frontend validation and contributed to registration/sign-in workflows; tested UI behaviour using Jest and React Testing Library.

Australian Climate Data Explorer | *Java, Javalin, SQLite, JDBC, SQL* 2025

- Built filters, sorting and result tables for Australian Bureau of Meteorology weather-station data.
- Wrote SQL/JDBC queries for relational aggregates and cross-period station similarity analysis; supported CSV exports.

CommunityEats (in progress) | *Spring Boot, Spring Security, JDBC, Thymeleaf, H2* 2026

- Implemented database-backed sign-in and role-aware navigation using Spring Security, BCrypt and JDBC repositories.
- Added Flyway migrations and authentication tests; configured GitHub Actions to run Maven builds/tests in a six-person Agile team.

PROJECTS IN DESIGN

AI-Assisted Career Platform | *Planned: Next.js, FastAPI, Supabase* Design phase

- Designing a tool to analyse job requirements, compare them with verified experience and propose evidence-backed résumé improvements for user approval.

Launchpad | *Planned: Go, React, Docker, Azure Container Apps* Design phase

- Planning a deployment workflow that runs tests for a supported GitHub repository, builds a Docker image and deploys an application to Azure.

ADDITIONAL

Engineering practices: Git branching, pull requests, Agile development, automated testing, continuous integration
